

CKGSB BCISeptember 2023

27 September 2023

CKGSB Case Center and Center for Economic Research

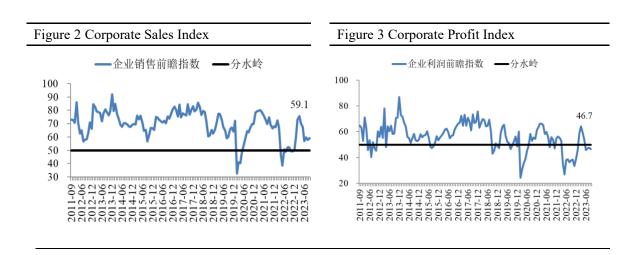

The CKGSB Business Conditions Index (BCI) registered 49.9 in September, a slight improvement on August's score of 49.0, albeit still below the confidence line of 50.0. It suggests that the economy has still not completely left its troubles behind.

The CKGSB BCI comprises four sub-indices: sales, profit, financing environment, and inventory. Three measure prospects and one, the corporate financing index, measures the current state of affairs. In September 2023, they performed as follows:

Source: CKGSB Case Center and Center for Economic Research

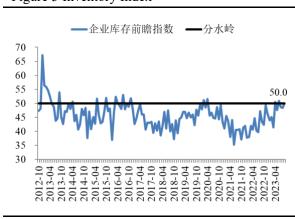

Source: CKGSB Case Center and Center for Economic Research

Three of the four subindices rose in September. Corporate sales prospects rose fell marginally from 57.8 to 59.1 (Figure 2), while the corporate profit index fell somewhat from 47.5 to 46.7 (Figure 3). For profit expectations to linger below the confidence line for a long time is rare of the course of our 12-year-long survey.

Corporate financing prospects improved, rising from 44.0 to 46.1 (Figure 4), as did inventory prospects, rising from 48.4 to 50.0 (Figure 5).

Important to note is that, unlike for sales, profit and financing, when it comes to the subindex measuring inventory, a falling index means overcapacity. While for the first three sub-indices, a rise means that the situation is improving, and a fall, deteriorating, for inventory a fall suggests stocks may be gathering dust in the warehouse.

Aside from the main BCI, we also forecast costs, prices, investment and recruitment demand over the next six months. We begin with costs:

Figure 6 Labor Costs Index

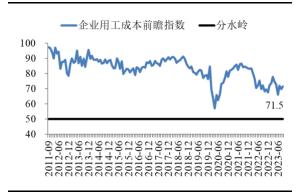

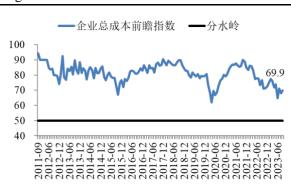

Figure 7 Overall Costs Index

This month, labor cost expectations rebounded slightly, from 69.8 to 71.5. The overall costs index also rose slightly, from 68.1 to 69.9. The still high overall cost predictions mean most companies anticipate rising staff costs in the next six months, and the same is true for overall costs. Although high labor and overall costs increase pressure on companies' bottom lines, they do not necessarily mean a deterioration of business conditions in China over the next six months. It could also mean the economy is improving, as companies are pushed to spend more as demand warms up. When the economy is improving, company output or sales increase, and more people and materials need to be invested in production, which means operating conditions are on the up. When unit costs of production or sales rise, demand may have increased. Companies feel the impact of cost hikes, but this is mitigated by boosted sales. For specific data, see Figures 6 and 7.

Let's look at price prospects. The consumer price index fell this month, from 50.8 last month to 50.0 (Figure 8). The producer price index continued to slide this month, with an index of 35.6 last month turning into one of only 34.4 this month (Figure 9).

We now turn to investment and recruitment. These indices have both been at the more confident end of the scale since the BCI began. In the past few months, they have trended downwards. Since the Chinese economy is largely investment-driven, and investment has a strong link with job recruitment, they are important to follow. In other words, these two indicators look at plans for expansion in China's business world. This month the index for investment rose from 54.7 to 57.6 (Figure 10); the index for employment slid from 56.4 to 54.9 (Figure 11).

We conclude with an index recording our sample's relative strength in the marketplace. Figure 12 shows self-reported competitiveness compared with industry peers. This rose to 69.6 in September. As our sample is mainly excellent private firms run by CKGSB alumni, their competitiveness is higher than average (50 points) in their respective cohorts. This suggests that Chinese industry is, on the whole, having a harder time than our BCI sample.

CKGSB BCI Introduction

In June 2011, the CKGSB Case Center and the Center for Economic Research initiated a project to gauge the business sentiment of executives regarding the macroeconomic environment in China – calling it a business conditions index.

Under the direction of Professor Li Wei, the two research centers designed and tested the BCI survey in July 2011. In September 2011, the first survey was carried out. 142 surveys have now been completed between May 2012 and September 2023 and 137 reports published (Three months at the beginning resulted in no report).

Explanation of the Index

The CKGSB Business Conditions Index (CKBCI) is a set of forward-looking diffusion indicators. The index takes 50 as its threshold, so a value above 50 means that the variable that the index measures is expected to increase, while a value below 50 means that the variable is expected to fall. The CKGSB BCI uses the same methodology as the PMI index.

The survey asks senior executives of companies whether their main products are for consumers or non-consumers, and then asks how they think product prices will change in the next six months. Based on survey responses, we have been able to report expectant changes in consumer and producer prices.

We ask companies for information pertaining to their relative competitive positions in their respective industries. Based on survey responses, we compute a competitiveness index for our sample. The higher the competitiveness index, the more competitive our sample firms are in their respective industries.

Method of Calculation

During each survey, respondents are asked to indicate whether certain aspects of their business (e.g., sales) are expected to increase, remain unchanged, or decrease over the forthcoming six months as compared to the same time period last year. The diffusion index is calculated by summing the percentage of "increase" responses and half of the "remain unchanged" responses.

Of all the indices measured for the CKGSB BCI, the overall business conditions index is an aggregate index, which has been calculated, since December 2012, by averaging its four constituent indices of sales, profit, financing environment and inventory. The aggregate BCI index before December 2012 used a different composition of constituent indices, and is therefore not directly comparable to the current BCI index.

About Cheung Kong Graduate School of Business

Education for a New Era of Global Business

Established in Beijing in November 2002 with generous support from the Li Ka Shing Foundation, CKGSB is China's leading non-profit, independent educational institution. The school offers innovative English MBA, Chinese MBA, Executive MBA and Executive Education programs. In addition to its campus in the center of Beijing, it has teaching sites in Shanghai and Shenzhen and representative offices in Hong Kong, London and New York.

Thought Leaders on Business in China

CKGSB faculty, through their on-the-ground research and close relationships with leading domestic executives, provide global thought leadership on both the theory and the practical reality of real-life business in China. They consistently generate important insights into areas that are poorly understood outside of China, such as the globalization strategies of Chinese companies and competition and collaboration among state-owned enterprises, private businesses and multinationals.

World-Class Faculty with a Global Perspective

CKGSB is the only business school in China with the reputation and resources to attract faculty from top business schools such as Wharton, Stanford, NYU and INSEAD. The majority of CKGSB faculty members were born and raised in China before leaving to study and teach abroad. Their bicultural backgrounds have endowed them with a valuable capacity to interpret global business in the context of both China and the West.
